

RISK STATEMENT

Trading CFDs is very speculative, includes a significant risk of loss and it is not suitable for all investors, but only for those clients who:

- understand and are willing to take economic, legal, and other risks;
- are experienced and familiar with trading in derivatives and basic asset types;
- are financially capable of incurring losses significantly higher than the margin or deposit because investors may lose the total value of the contract and not only the margin or deposit.

CFDs are complex instruments and carry a high risk of losing money due to leverage. A high leverage level can work against you as well as for you.

There is a possibility that you can bear the loss of some or all the initial investments and therefore you should not invest money that you cannot afford to lose.

You should be aware of all risks associated with margin trading and seek advice from an independent financial advisor if you have any doubts.

The Client accepts that commissions, fees and other fees may apply, and as such these fees will affect / reduce profits (if any) or increase losses. Before trading financial instruments, you should be aware of all the expenses you can pay, no matter those fees are pre-determined or variable.

Risks associated with long positions of CFD, ie. for CFD buyers

CFD's long position means you are buying CFDs in the market by speculating that the market price of the underlying asset will rise between the time of purchase and sale. As the owner of a long position you will make a profit if the market price of the underlying asset increases while the CFD long position is open.

Risks associated with short CFD positions (Short), ie. For CFD sellers

A short position in a CFD means that you are selling CFDs in the market speculating that the market price of the underlying asset will fall between the time of purchase and sale. As the owner of a short position you will make a profit if the market price of the underlying asset decreases while the CFD short position is open.

Leverage

Leverage trading applies only to derivative financial instruments, in this case contracts for difference (CFDs) and means that the Client can trade with the values of the underlying assets contained in the derivative that are significantly higher than the funds actually invested by the Client, which serve exclusively as a margin. High leverage can significantly increase potential earnings, but it can also significantly increase potential losses. Leverage is defined as the ratio

of the burden on the Client's assets to the total value of the underlying assets contained in the derivative or CFD (up to 1: 100).

Margin requirements

The client must always maintain a minimum margin in their open positions. The client is responsible for monitoring the account balance.

Spread

The difference between the bid price and the demand price is "Spread".

Settlement in cash

The investor understands that the CFD can only be settled in cash, and the difference between the purchase and sale price is partly determined by the result of the investment.

Conflict of interest

Finveo AD is a broker between clients and liquidity providers to all transactions concluded under the Investment Services Agreement and, therefore, Finveo AD's interests may conflict with yours. Our Conflict-of-Interest Management Policy is available on the website www.finveo.mn.

OTC transactions

When trading CFDs with us, such transactions will not be executed on a recognized or designated stock exchange and are known as OTC transactions.

Currency risk

Investing in CFDs with underlying assets denominated in a currency other than your base currency involves currency risk due to the fact that, when the CFD is settled in a currency other than your base currency, the value of your return may be affected by conversion to the base currency.

There is no guarantee of profit

There are no guarantees of profit or avoidance of losses when trading CFDs. The client did not receive such guarantees from any of the company's representatives. The client is aware of the risks associated with trading CFDs and is financially able to bear such risks and bear any losses incurred.

Internet trading

There are risks associated with using an online trading system to execute contracts that include, but are not limited to, interrupt of hardware, software, and Internet connections. The result of a system failure may be that your request is not executed in accordance with the instructions or that it is not executed at all.

Since Finveo AD does not control the signal strength, its reception or routing via the Internet, the configuration of your equipment or the reliability of its connection, we cannot be held responsible for communication failures or delays in trading via the Internet.

Market opinions

All opinions, news, research, analyses, prices or other information published on this website are provided as general market comments and do not constitute investment advice.

Finveo AD will not accept liability for any loss or damage, including without limitation, loss of profit, which may arise directly or indirectly from the use or reliance on such information.
